NOTICE of ALLOWABILITY

Status of the Claims

This action is in response to papers filed 27 July 2006 in which claims 20, 21, 28 were amended. Claims 1-16 and 29 are canceled. The previous objections and rejections in the Office Action dated 2 June 2006 are withdrawn in view of the amendments. The amendments place the pending claims in condition for allowance.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The title is changed to the following:

METHOD FOR MANUFACTURING A NUCLEOTIDE DETECTOR

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The claims are drawn to methods for making a nucleotide detector. The claims require arranging metal-protein complexes on a substrate, removing the protein and attaching the nucleic acids to the metal particles remaining on the substrate. The prior art is replete with methods of making nucleotide detectors wherein the detectors comprise nucleic acids attached to metal particles. However, the prior art does not teach or suggest using and removing a

protein to provide the detector. The closest prior art, Furlong et al (U.S. Patent No. 6,239,255) immobilizes GBP-AP protein onto a gold surface, digests the AP domain from the GBP and attaches to the GBP a recognition element e.g. "Protein A, antibody, antigen, nucleic acid or other binding partner" (Abstract). However, the prior art does not teach or suggest arranging multiples of gold surface taught by Furlong et al onto a substrate prior to protein removal or nucleic acid attachment. Furthermore, because the prior art is so replete with particle immobilized nucleic acids using methods not requiring the claimed intermediate protein, the prior art would not lead one of ordinary skill to add the additional steps as claimed.

Conclusion

Claims 17-28 are allowed.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.
